Q1: False
True
True
False
True
True

Q2: prints 4, 10, 5
initially a and b alias the same Counter. Reassigning b creates a separate object.

Q3: Remove void from the constructor and assign using this.name = name and this.year = year

Q4: - Moving for v.move()
Pedaling for b.move()
- calls the superclass constructor
- Moving at 15

```
class Manager extends Employee {
    private String department;
    public Manager(String name, String department) {
        super(name);
        this.department = department;
    }
    @Override
    public void describe() {
        System.out.println("Manager: " + name
            + ", Department: " + department);
    }
}
```
